

## CATTLEYA CULTURE

General guide to basic culture:

**LIGHT:** Cattleyas require good light but not direct sunlight.

**TEMPERATURE:** While most Cattleyas will grow cold, they do appreciate some protection in winter, such as being placed on a back verandah where you can control the watering.

**WATERING:** In summer they may need to be watered two times per week, allowing to dry out between waterings; reduce to once a fortnight in winter; always water early in the day.

**FERTILISING:** Half recommended strength of liquid fertiliser; preferably use flowering type formula fortnightly from spring through summer.

**POTTING:** Repot when plant has overgrown pot or the potting mix has become soggy. Plants may be potted in medium grade orchid bark or similar.

**PESTS & DISEASES:** Mealy bugs, scale and munching insects are the main problems and can be treated by visiting your local nursery and purchasing the required treatments.

For more information visit an orchid society such as The North Shore Orchid Society which meets at 8.00pm on the 1<sup>st</sup> Wednesday of the month at the Forestville Memorial Hall, Starkey St, Forestville. All visitors welcome.
